### Open-Source

My general research interests include languages and tools for parallel computing and compiler optimizations.

My interests and experiences in open source:

One of my courses, Cluster Computing, focused on studying Linux-based clusters. Students installed and evaluated a selection of open-source cluster-middleware tools, including MOSIX (a Unix-based cluster OS), GFS (Global File System), NSC (Non-Stop Clusters), and LVS (Linux Virtual Server), and discussed challenging issues remaining.

I have also been following the Open64 compiler project.
